EE 4501 - Final Exam Information

- The final examination, worth 25% of the grade, will be conducted on **December 17, Saturday**, in class.

- Exam duration: **2 hours**. The exam will begin at 8:00 AM.

- The exam will be **closed-book and closed-notes**. An updated crib sheet will be provided along with the exam.

- Space will be provided for you to write your answer in the question paper itself (just like the quiz/mid-term).

- At least one blank page will be reserved for scratch work. If you need extra pages, ask the TA/instructor during the exam for one, do not use your own paper either for scratch work, or for work turned in.

- **Calculators are allowed**, including graphing calculators.

- An exam study guide will be posted.

- Exam pattern:
  - **Part A**:
    * 11 objective type questions (true/false, fill in blanks, sketch graphs), each worth 2 points.
    * The maximum score for Part A is 20 points (so you can potentially get one of the questions wrong and still get a full score).
  - **Part B**:
    * 3 problems, each worth 10 points, similar to the mid-term exam pattern.
    * 2 of these problems will be drawn from post-mid-term topics, and 1 from the pre-mid-term part of the course.
    * At least 1 problem, or a part of a problem, will be on probability/noise analysis.
