

Co/Pd Multilayers for Perpendicular Magnetic Recording Media

Xiaobo Huang, Neal Speetzen and Bethanie J.H. Stadler
Electrical and Computer Engineering, University of Minnesota

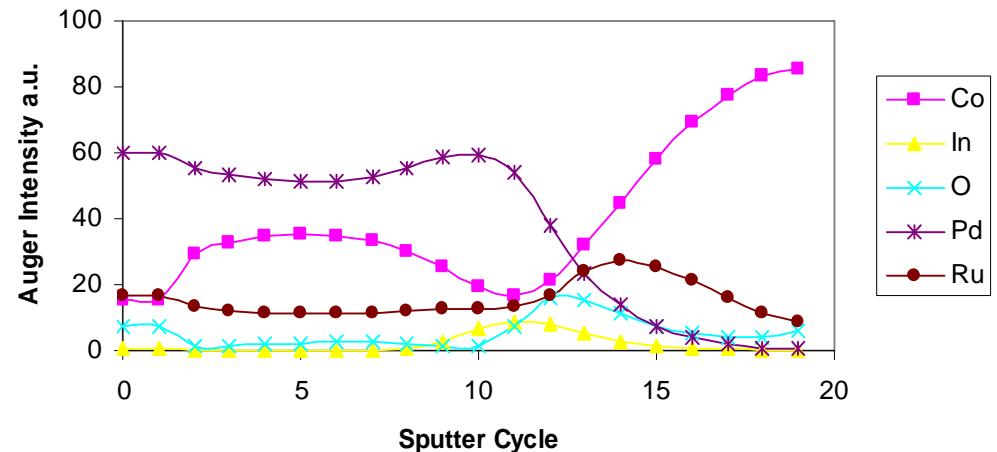

I Co/Pd multilayered media

- u Possess high anisotropy, high coercivity, high squareness, and large negative nucleation fields.
- u InSn seedlayers increased coercivity from ~5kOe to 12.2kOe.
- u Oxygen can be used to vary important parameters

I Observations

- u Auger sputter depth profile shows the element distribution in the multilayer.

- u Small Grain Size: Grain size was 11.7nm +/- 14.9%.

I Publications

- u N. Speetzen, X. Huang, B.J.H. Stadler, R.H. Victora, Accepted J Appl Phys (Sept 2005).
